JALA Academy
Assignment 13

Functions & Flexible Arguments

Python solution reference • Code examples are organized by the assignment questions.

How to use this document

Save the code examples into a .py file and run with Python 3. Where a program asks for input, enter values when prompted. For file-handling exercises, create the named text file in the same folder first.

1. Function with parameters

```
def add(a, b):
    return a + b
print(add(10, 20))
```

2. Default parameters

```
def greet(name, message="Hello"):
    print(f"{message}, {name}!")
greet("Inchara")
greet("Inchara", "Welcome")
```

3. Keyword arguments

```
def person(name, age, city):
    print(f"{name} is {age} years old and lives in {city}.")

person(name="Anu", age=21, city="Mysuru")
person(city="Bengaluru", name="Ravi", age=23)
```

4. Flexible positional arguments (*args)

```
def total(*args):
    return sum(args)
print(total(1, 2, 3))
print(total(10, 20, 30, 40))
```

5. Flexible keyword arguments (**kwargs)

```
def show_details(**kwargs):
    for key, value in kwargs.items():
        print(f"{key}: {value}")

show_details(name="Inchara", course="Python", level="Beginner")
```
